README.m – Labor extension of model

Make the following changes:

- ModYUKE.model – Using ModYUK.model as a template, add new variables, parameters and equations and change existing ones as necessary.
- readDefinitions.m – Change the version, eg LABOR.
- readModel.m – Add new steady-state values, as well as new initial values for transitory parameters.
- readData.m – Add new measurement variables to database.
- estimateParams.m – Add priors for new parameters.
- printReport.m – Extend to include graphs of new variables. Change the version of the report to the one specified in readDefinitions.m.

Once you have made the appropriate changes, run readModel.m, readData.m, estimateParams.m and printReport.m.
