`README.m` – Reproducing "Estimating Potential Output with a Multivariate Filter"

The user is assumed to comfortable with the material under `IntroToIRIS`, `MODEL`, `Example1`, `Example2`, and `Example3`. To reproduce the paper results for country X...

- Change the priors on the steady-state parameters in `readModel.m` accordingly – see Table 1. in the paper. Save `readModel.m`.
- Open `driver.m` for editing and set

```
country= 'CC';
```

where `'CC'` is the two-letter mnemonic for country X. See `InputData/README.pdf` for the list of mnemonics used.

- Save `driver.m` and run it.
